Abstract (en)

[origin: CN113454913A] A device, system and method for creating pulsed electric fields with good uniformity are provided. The electric fields occupy a large volume, suitable for placing a human or animal patient. A device for generating the electric fields is provided, which comprises one or more toroidally or cylindrically shaped magnetic core(s) wound with electrical wires, which, when pulsed with electrical currents, generate an electric field of high uniformity in the interior region of the toroidal or cylindrical cores. These electric field pulses, when used in conjunction with pharmacological agent, destroy cancer cells through a process called Targeted Osmotic Lysis.
