Abstract (en)

[origin: WO2020114623A1] The invention relates to a method and a device for evaluating and providing video signals of an event. A uniform time signal is assigned to recorded video signals of the event, to acquired camera parameters and to metadata, whereupon an automatic evaluation of the video signals is carried out as a function of a user input in a data processing device. In this way, a desired part of the video signals can be provided to the user as a function of the evaluation.
