Abstract (en)

[origin: WO2020117118A1] A method and a wireless device (100) in connected mode when accessing a cell and operating in a wireless communications network (102) and having a set of stored configurations for at least one target cell X (106A-106C). The wireless device (100) updates one or more stored configurations comprised in the set of stored configurations upon access of the cell. When the accessed cell is one of the target cell(s), the wireless device (100) applies one out of the one or more stored configurations comprised in the set of stored configurations to access the one of the at least one target cell X. When the accessed cell is different from the target cell(s), the wireless device (100) applies a received configuration to access the cell.
