Abstract (en)
[origin: EP3892552A1] A packing tool capable of displaying tension includes a body and a control device. The body includes a strap winding device. A handle and a ratchet gear are fitted on the strap winding device. The ratchet gear abuts against a first abutting member. The control device is connected to the handle and includes a processing unit. The processing unit is electrically connected to a detection unit and a display unit. The detection unit is used to detect the amount of deformation of the first abutting member and then calculate and output a tension value to the display unit, so that the user can pay attention to the tension value applied to a packing strap by the packing tool at any time, so as to achieve the purpose of fast packing.
