Abstract (en)
Objects of the present invention are, firstly, to facilitate yarn threading and, secondly, to suppress an unintentional winding of yarns around rotating members at the time of yarn breakage in a draw texturing machine in which plural twisting units are provided on plural stages. In a draw texturing machine comprising plural twisting units 14 each of which includes rotating members 45 to 48 rotated at the time of twisting a yarn Y and which are aligned in a predetermined arrangement direction and provided on plural stages, a partition 60 is provided between a yarn path of the yarn Y passing one twisting unit 14A (or 14B) on one of the plural stages and the rotating members 45 to 48 of one twisting unit 14B (or 14A) which is provided on another stage of the plural stages and which is close to the yarn path.
