## Abstract (en)

This invention relates to a linear building module (70; 71) for making structural frames of thermally insulated multi-storey buildings, comprising an upper face, a lower face, substantially parallel to said upper face, and four lateral faces, said linear module (70; 71) comprising: an inner body (10) comprising a plurality of structural elements (11; 12) spaced apart from each other so as to form a plurality of cavities, said structural elements (11; 12) comprising at least two perimeter elements (11) arranged on respective opposing lateral faces of said linear module (70; 71); filling elements (20) made of thermally insulated material, placed in said plurality of cavities so as to fill them; and at least two outer cover elements (30', 30'') for covering said body (10) and said filling elements (20) at said lower face and said upper face, respectively, said cover elements (30', 30'') being blocked, by means of blocking means, to said body (10) so as to form a self-supporting element. This invention also relates to a kit comprising at least two linear building modules (70; 71) and to a multi-storey building formed by such linear modules (70; 71).
