Abstract (en)

[origin: CA3175143A1] The present invention relates to a panel (10a, 10b) for a paneling, more particularly to a floor panel for a floor covering, comprising: - a panel upper surface (12) and a panel lower surface (14) parallel to the panel upper surface, which are mutually spaced by a total thickness (G); - an upper coupling element (16) and a lower coupling element (18), wherein two panels (10a, 10b) of this type are designed such that said panels can be coupled to each other by means of a downward movement of the upper coupling element (16) of the first panel (10a) relative to the lower coupling element (18) of the second panel (10b); wherein the upper coupling element (16) has a detent element (24) and the lower coupling element (18) has a detent receptacle (26); wherein the upper coupling element (16) has a locking receptacle (28) and the lower coupling element (18) has a locking element (30); and wherein a material thickness (UM) of the lower coupling element (18) between the panel lower surface (14) and the detent receptacle (26) is less than 100 percent of a material thickness (OM) of the upper coupling element (16) between the panel upper surface (12) and the locking receptacle (28).
