Abstract (en)

[origin: EP3666182A1] The present invention relates to device, system and method for providing bio-feedback to a user. The device comprises an interface (11) configured to obtain skin conductance measurements of a user and to output user instructions and bio-feedback information; and a processing unit (12) configured to generate user instructions indicating one or more actions to follow by the user, identify one or more galvanic skin response (GSR) storms in a skin conductance trace of the obtained skin conductance measurements, identify a latency of a predetermined duration without a further GSR storm after the end of an identified GSR storm, and generate, if at least one GSR storm followed by a latency has been identified, bio-feedback information providing bio-feedback related to the one or more actions followed by the user.
