Abstract (en)
[origin: WO2020120625A1] The invention relates to the field of cabled robots and more particularly to a connector (1) for cables (21, 22) comprising a first block (11) and a second block (12), the first and second blocks being configured to be connected together and to form, when they are connected together, a plurality of sliding guides in each of which a pair of first and second cables (21, 22) connected together at their respective first ends (210, 220) is intended to slide, the connector also comprising a first locking component (13) mounted on the first block (11) so as to be movable between a locking position and a release position of the set of first ends (210) of the first cables (21), and also comprising a second locking component (14) mounted on the second block (12) so as to be movable between a locking position and a release position of the set of first ends (220) of the second cables.
