Abstract (en)

[origin: WO2020120605A1] This system (1) for changing a concentration of at least one given group of particles comprised in a fluid, the system comprising: - a first container (11) and a second container (12); - a first transfer device (13) and a second transfer device (14), wherein the first container (11) is fluidly connected to an inlet (133) of the first transfer device (13) and the second container (12) is fluidly connected to an inlet (143) of the second transfer device (14), each of the first and second transfer devices (13, 14) comprising: a chamber configured to be associated with at least one acoustic wave generator for generating acoustic waves within the chamber; at least two outlets (134, 135, 144, 145) comprising a first outlet (134, 144) for fluid enriched with said given group of particles and a second outlet (135, 145) for fluid depleted of said given group of particles; the first outlet (134, 144) being fluidly connected to the first container (11) and the second outlet (135, 145) being fluidly connected to the second container (12); and - means for keeping the volume of fluid in each of the first and second containers (11, 12) constant.
