Abstract (en)

[origin: WO2020120790A1] The invention relates to a shopping basket, in particular shopping trolley basket, with a separating element for dividing the interior space of the shopping basket, having a connecting element for fastening the separating element to a first lattice rod of the shopping basket, wherein the connecting element fastens the separating element pivotably to the first lattice rod such that the separating element is pivotable from a first position into a second position protruding from the sides of the shopping basket, wherein the separating element and/or the connecting element form/form a stop which, when the second position of the separating element is reached, comes to lie against a second lattice rod and prevents the separating element from pivoting beyond the second position. Furthermore, the invention relates to a kit for dividing a shopping basket.
