Abstract (en)
[origin: WO2020148188A1] A panic lock (1) comprising a cylinder having a pawl (7) that is rotatable by a key for moving a bolt (3), a rotatable element (8) for driving a latch (6), a cam (9) present on the rotatable element (8), a movement receiver and distributor comprising a first rotatable plate (10) comprising a first shaped perimeter take-up profile (12) for taking up the movement from the pawl (7) and a second shaped perimeter take-up profile (13) for taking up the movement from the cam (9), and a drawing organ (14) for drawing the bolt (3) that is slidable in said slot (5), said slot (5) having an intermediate portion (5a) shaped for the reversible movement of the bolt (3) by the drawing organ (14), a first and respectively a second end portion (5b, 5c) shaped for locking of the bolt (3) by the drawing organ (14) in end stroke positions, an elastic pushing element (11) interacting with the first plate (10) to assist the end stroke positions to be reached being further provided.
