Abstract (en)

[origin: WO2020120572A1] The invention relates to a rotor of a rotating machine comprising a rotor shaft (1) comprising an axis of rotation (X) and an attachment portion (13) comprising a radial end surface (11). The rotor further comprises a magnetic encoder device (3) attached to the rotor shaft (1). The encoder device (3) comprises a holder (32) comprising a separating wall (321) made of non-magnetic material, comprising a recess surrounding the peripheral attachment surface and a magnetic encoder (33) attached to the holder (32).
