Abstract (en)  
[origin: WO2020120557A1] The invention relates to an assembly (10) for a vehicle (1) for detecting an activation handling process for activating a function on the vehicle (1), in particular for detecting an activation handling process in a front, lateral, and/or rear region (1.7, 1.4, 1.2) of the vehicle (1) for activating an opening and/or unlocking procedure of a hatch (1.3, 1.6) on the vehicle (1), having: - at least one sensor element (20) for detecting a change, in particular the approach of an activation means (3), in the surroundings of the sensor element (20), - a monitoring assembly (100) which is electrically connected to the sensor element (20) in order to provide an electric sensor signal that is specific to a parameter of the sensor element (20), wherein the parameter is specific to the detected change in the surroundings, - an analysis assembly (200) for repeatedly ascertaining the parameter of the sensor element (20) by transmitting the sensor signal to a storage assembly (250) in order to carry out the detection of the activation handling process, and - an analysis filter assembly (210) of the analysis assembly (200) for a bandpass filter and/or transconductance conversion of the sensor signal for the transmission to the storage assembly (250).
