Abstract (en)

[origin: US2021321745A1] A mechanism for a receptacle for applying a cosmetic product is provided. The mechanism is designed to make the cosmetic product exit by at least one rotation movement, the mechanism including at least one sheath made of plastic material and a casing made of plastic material external to the sheath, the casing and the sheath being interfused in at least one point, called assembly point, so as to be integral in rotation and in translation.
