Abstract (en)  
[origin: WO2020128372A2] The invention relates to a method for reducing the increase in the temperature of surface of the earth (G) due to the discharge of hot gases into the atmosphere (A) of the earth due to the burning of fossil fuels and non-fossil fuels, characterized in that the combustion gases are cooled to temperatures such that the wavelength of the infrared thermal radiation emitted at the cooling temperature does not correspond either to the wavelength of water vapor absorption nor to the wavelength of carbon dioxide absorption. The invention also relates to the device, vehicle and station for implementing the method.
