Abstract (en)  
[origin: WO2020127906A1] The present invention concerns a mixing machine (6), configured to receive a reception device (5) in order to form a mixing machine (6), the manufacturing apparatus comprising - a support (31) defining a reception housing (32), capable of receiving a reception device (5), the reception device (5) being configured to receive first and second capsules (3, 4) containing, respectively, a first formulation and a second formulation, the two capsules (3, 4) being fluidically connected, - an actuating system (35), that can move inside the reception housing (32) in order to exert a pressure on the reception device (5) and/or on the first and/or second capsule (3, 4), - a coupling mechanism (52), that can move with respect to the the support (31) and is configured so as: \*in an insertion position, not to interfere with the insertion and removal of the reception device (5) in the reception housing (32); \*in a coupling position, to exert a force on an actuating face (8.1, 9.1) of the reception device (5).
