Abstract (en)  
[origin: WO2020127916A1] The present invention relates to a reception device (5) for forming a mixing machine (6) when said reception device (5) is introduced into a manufacturing apparatus (2), the reception device (5) comprising: - a first reception location (13), configured to receive a first capsule (3) containing a first formulation; - a second reception location (14), configured to receive a second capsule (4) containing a second formulation, the two capsules (3, 4) being able to be fluidly connected; - a first activation face (8.1) of the reception device (5), allowing a pressure force to be transferred to the first capsule (3), the first activation face (8.1) comprising a first protective shell (8); - a second activation face (9.1) of the reception device (5), opposite the first, allowing a pressure force to be transferred to the second capsule (4), the second activation face (9.1) comprising a second protective shell (9); a shutter (17.1) opening towards the outside of the reception device (5) and extending between the two reception locations (13, 14), so that it allows the capsules (3, 4) to be introduced separately and the capsules (3, 4) to be extracted integrally.
