Abstract (en)

[origin: WO2020127594A1] The invention relates to an article comprising a metal substrate and a channel in the metal substrate, which channel is completely or partly open to the surface. The cross-section of the channel has a local width maximum (5) between the channel base (7) and the contact plane (1) at the perpendicular cut relative to the surface measured parallel relative to the contact plane and perpendicular to the channel longitudinal axis.
