Abstract (en)

[origin: WO2020127972A1] The invention relates to an electrically driven variable small vehicle which can be reconfigured between two configurations, namely an initial configuration, in which a load area and a standing area behind the load area are provided, and a configuration which is shortened relative to the initial configuration and in which either the load area or the standing area is deactivated. In both configurations, only exactly two axles, a front axle and a rear axle, are actively on the ground. The invention further relates to a method for comfortably reconfiguring the small vehicle.
