Abstract (en)

[origin: WO2020127778A2] A hull structure (10) for integration with a hull (2) of a ship (1) and a method and thruster control module (1600) for manoeuvring the ship (1) are disclosed. The hull structure (10) comprises a through-hole (14), extending through the hull structure (10) in the transversal direction (34). The hull structure (10) is adapted to accommodate at least one thruster unit (41, 42) in the through-hole (14). The hull structure (10) comprises a front hull part (50) limiting the through-hole (14) in the forward direction (30). The front hull part (50) is tapered, in the aftward direction (32), in a cross-section (60) that is perpendicular to the main plane (20) and that is parallel to the aftward direction (32). Furthermore, the front hull part (50) has a front length (52), in the cross-section (60), in the aftward direction (32) that is greater than one quarter of a widest front width (54) of the front hull part (50) in the cross-section (60). A computer program and a carrier corresponding to the method for manoeuvring the ship are also disclosed.
