Abstract (en)  
[origin: WO2020127787A1] Lift rail (2) which serves for guiding cars (3) of a lift system (1). The cars (3) serve, in particular in the form of cabins (4), for transporting people or goods, or as a counterweight (5). The lift rail (2) has more than one guide contour (6). The guide contour (6) is suitable for interacting with a guide shoe (11) such that, in a first horizontal direction (7), a relative horizontal displacement between the guide contour (6) and guide shoe (11) is delimited at least on one side, and that, in a second horizontal direction (8), perpendicular to the first, a relative horizontal displacement between the guide contour (6) and guide shoe (11) is delimited on both sides. The lift rail (2) has a closed-surround cross section. The lift rail (2) has at least three guide contours (6), which are formed on the outer surface of the lift rail (2).
