Abstract (en)

[origin: WO2020126906A1] The invention relates to a building site device, comprising a climbing formwork platform (5) for the floor-by-floor production of concrete sections of a building core having at least one elevator shaft (1). The invention also relates to an elevator system (2) having a elevator machine platform (24) which is vertically displaceable in an elevator shaft. In order to minimize the use of lifting cranes and the manual lifting of supporting structures, the elevator machine platform (24) according to the invention is movable along with the climbing formwork platform (5).
