Abstract (en)

[origin: WO2020128738A1] A door or window comprises a frame (1) and a panel (2). The panel (2) has a first housing hole (5) formed at a central portion of an edge surface (2a) of the panel itself. The frame (1) has a second housing hole (7) formed at a central portion of an edge surface (1a) of the frame itself. A closure device is also provided, inserted in the first housing hole (5) and in the second housing hole (7) and selectable between a magnetic induction closure device (3) and a mechanical catch lock (10). In the case of the magnetic induction closure device (3), a magnetic induction catch (3a) is inserted in the first housing hole (5) and at least one magnetic induction armature (3b) is inserted in the second housing hole (7). In the case of the mechanical catch lock (10), a lock body (10a) is inserted in the first housing hole (5) and a mechanical armature (10b) is inserted in the second housing hole (7). The first connection plate (4) of the magnetic induction catch (3a) and the second connection plate (11) of the lock body (10a) have a shape and dimensions such as to allow the fixing thereof at the first housing hole (5) of the panel (2) of the door or window. The first connection interface (6) of the magnetic induction armature (3b) and the second connection interface (12) of the mechanical armature (10b) have a shape and dimensions such as to allow the fixing thereof at the second housing hole (7) of the frame (1) of the door or window.
