Abstract (en)
[origin: WO2020125846A1] The invention relates to an actuating device (16) for actuating at least two free gears (21, 22) arranged adjacent to one another in the axial direction on a shaft (14), the actuating device comprising at least two sliding sleeves (23, 24). In order to simplify the actuation of at least two free gears (21, 22), an actuating sleeve (17), by means of which the two sliding sleeves (23, 24) can be actuated, can be moved between three actuation positions, while at least one of the sliding sleeves (23, 24) can be moved only between two shifting positions.
