Abstract (en)

[origin: WO2020127732A1] The invention relates to a method for generating and displaying a virtual object (16) to an individual user by an optical system (1) consisting of gaze-tracking glasses (2) and at least one display unit (3) connected to the gaze-tracking glasses (2), the display unit (3) having a first display (4), the gaze-tracking glasses (2) having a first eye-tracking camera (5), the first display (4) being arranged in a first viewing region (7) of the gaze-tracking glasses (2). According to the invention, the optical system (1) is adapted to an individual user, a first target value for adaptation of a display control unit (8) of the display unit (3) for controlling the first display (4) being determined, a current viewing direction of the first eye (6) being determined by the gaze-tracking glasses (2), a virtual object (16) being generated and, taking account of the first target value, the virtual object (16) being displayed in the first display (4) at a position in the determined viewing direction of the first eye (6).
