Abstract (en)
[origin: WO2020126376A1] The invention relates to a method for monitoring an occupant of a vehicle (1), according to which it is determined whether information content perceptible in the vehicle is output, and identification data relating to the output information content are detected. The method according to the invention is characterised in that at least during, or for a period of time following, the output of the information content, a conversation inside the vehicle (1) is detected by means of a microphone (7-3) inside the vehicle (1), the detected conversation that was conducted during, or for a period of time following, the output of the information content is analysed, and, on the basis of the analysis of the conversation and the detected identification data of the information content output during or before the conversation, it is determined whether the output information content was perceived by an occupant of the vehicle (1). The invention further relates to a device for carrying out the present method.
