Abstract (en)

[origin: WO2020126737A1] The invention relates to a method for validating transmitted image data, comprising the steps: providing image data and transmitting the image data to a display unit (2); providing reference image data; comparing the transmitted image data to the reference image data by means of a cross-correlation in a comparison unit (5), whether the reference image data are present in the transmitted image data; creating a comparison probability value based on the comparison; displaying the transmitted image data on the display unit (2) if the comparison probability value is above a provided, predefined limit probability value; outputting a substitute response if the comparison probability value is below the provided, predefined limit probability value. The invention further relates to an apparatus, to a computer program, and to a computer-readable storage medium.
