Abstract (en)

[origin: WO2020127490A1] The invention relates to a method for detecting the fluid balance of a patient, in which a transfer function is created for the patient, by means of which a continuous course of the fluid balance of the patient can be determined for the past and a continuous course of the fluid balance can be predicted for the future. The invention also relates to a device for carrying out the method according to the invention, and to a program product.
