Abstract (en)

[origin: WO2020128096A1] The invention relates to an antenna device having a radiator assembly in a plane situated higher in an emitting/receiving direction; and in a plane situated lower in the emitting/receiving direction; wherein: the radiator assembly comprises at least four elements, which are arranged, so as to be mutually spaced by gaps, in the plane situated higher to form a quadrant structure; each of the four elements has a feed point in a central angular region, by means of which feed point each element is connected to a corresponding feed point of the feed network.
