Abstract (en)

[origin: WO2021144163A1] Methods of operating a wireless device in a communication network are provided. Such methods include receiving a scheduling message that includes a schedule identifying a plurality of transmission blocks, TBs and determining a quantity of the plurality of TBs that are identified in the scheduling message. Methods may include determining a quantity of Hybrid Automatic Repeat Request Acknowledgement, HARQ ACKs in an ACK bundle identified in the scheduling message and dynamically generating an acknowledgement timer value that corresponds to the quantity of the plurality of TBs and the quantity of HARQ ACKs in the ACK bundle.
