Abstract (en)

[origin: WO2020128750A1] A method, apparatus, and a computer-readable storage medium are provided. In one example implementation, the method may include receiving logical channel group (LCG) mapping information from a network node, detecting presence of data for transmitting from the user equipment (UE) to the network node,; determining whether a size of the data matches a buffer size value indicated by at least one of the buffer status index (BSI) values, and selecting a logical channel group (LCG) associated with the at least one of the buffer status index (BSI) values The method may further include transmitting a scheduling request (SR) to the network node.
