Abstract (en)

[origin: CN113545700A] The present invention provides a cleaning unit (11) comprising: a rotating brush (12) configured to be removably mounted in a receiving recess (9) of a suction head (2); a brush support (16) configured to close a passage opening (14) provided on the suction head (2), where the brush support (16) has a plug body configured to be fastened to the body of the suction head (2), with respect to which the rotating brush (12) is rotatably movably mounted; a rotary support (28) rotatably securely connected to the rotating brush (12) and connected to the plug body by a pivot (34); and an elastically deformable support element (35) on which the pivot (34) is mounted, the support element (35) being arranged between the pivot (34) and the plug body or between the pivot (34) and the rotary support (28).
