Abstract (en)  
A laundry treatment apparatus. The laundry treatment apparatus comprises: a laundry treatment barrel, a water supply valve (1), a delivery device (2), a water containing member, an atomization generator (3), and a one-way check mechanism. The delivery device (2) comprises a water delivery channel (21); the water supply valve (1) is connected to the inlet end of the water delivery channel (21); the outlet end of the water delivery channel (21) is connected to the atomization generator (3) by means of the water containing member; the outlet of the atomization generator (3) is disposed toward the inner cavity of the laundry treatment barrel; the one-way check mechanism is respectively connected to the water delivery channel (21) and the water containing member; and the one-way check mechanism is configured to be isolated from the atmosphere when the water supply valve (1) is opened and to be communicated with the atmosphere when the water supply valve (1) is closed. The laundry treatment device can improve the laundry washing effect of the laundry treatment device having a washing function, and improve the applicability to the laundry to meet use requirements of users, thereby improving the user experience.
