Abstract (en)
[origin: WO2020136581A1] A saddle-type vehicle (1A) is described, comprising an anti-theft device (100) for an helmet (10A), the anti-theft device (100) comprising: • - a housing integral with a part (2A) of the vehicle (1A); and • - an anchoring mechanism adapted to be at least partially received within the housing. The anchoring mechanism comprises: • - at least one anchoring member including a male anchoring portion configured to engage a female anchoring portion of the helmet (10A); and • - a lock member associated to the at least one anchoring member. The anchoring mechanism is adapted to assume: • an anchoring configuration, in which the male anchoring portion engages the female anchoring portion of the helmet (10A) to hold the helmet (10A); and • a release configuration, in which the female anchoring portion is disengaged from the male anchoring portion to separate the helmet (10A) from the vehicle (1A). A helmet (10A) is also described for a head of a driver, comprising a shell (17A) and at least one female anchoring portion provided on the shell (17A) which is shaped so to engage at least one male anchoring portion of an anchoring mechanism of a vehicle (1A).
