Abstract (en)

[origin: WO2020136049A1] The invention relates to a method and an arrangement (3) for commissioning a passenger transportation system (1). The commissioning is supported here by a mobile device (21) which is computer-controlled from an application and which is configured to exchange data both with a programmable controller (15) controlling the passenger transportation system (1) and with an external database (19), in which configuration information regarding configurations of a plurality of passenger transportation systems (1) is stored. The method comprises the steps of: retrieving, from the external database (19) by the computer-controlled mobile device (21), configuration information which details information regarding a configuration of the passenger transportation system (1); requesting, by the computer-controlled mobile device (21) under consideration of the configuration information, commissioning information which details information regarding parameters that must be set within the scope of a commissioning of the passenger transportation system (1); and transmitting the commissioning information to the controller (15) controlling the passenger transportation system (1). As a result, a commissioning process can be significantly simplified and is less susceptible to faults.
