Abstract (en)

[origin: WO2020136600A1] A method for the conversion of starch -containing (residual) streams to high- quality proteins, by means of the following steps: - the conversion of the starch- containing (residual) products (2) in a first and anaerobic fermentation (6), with formation of fatty acids, sugars and oligosaccharides; - the conversion of the reaction product of the first and anaerobic fermentation (6) into a protein concentrate (24) in a second, but now aerobic fermentation (20), by means of a culture of micro-organisms (18); - the optional separation of the microbial mass from the obtained reaction product (21), which mass comprises a concentrate of cellular protein fragments (24) for use as fish feed, cattle feed, pet food or in food for human consumption.
