Abstract (en)  
[origin: WO2020136275A1] A blind (1) comprising a plurality of lamellae (30) and a scissor-type guide (20) for guiding the plurality of lamellae (30) and a mount (100) for attaching a scissor-type guide (20) to an opening (2) of a building structure, said scissor type guide (20) comprising - at least two scissor links (23), each scissor link comprising a first scissor member (24) and a second scissor member (26), - a first end (20'); and - a free, second end (20'') which may be extended away from and retracted towards the first end (20') in a first direction (D1), wherein each lamella (30) has an elongate plate shape extending in a second direction (D2) perpendicular to said first direction (D1), said mount (100) comprising - a first mount member (101); - a second mount member (102), - a first rotational mount joint (103); and - a second rotational mount joint (104), wherein the first mount member (101) is rotatably connectable to the opening (2) of a building structure via the first rotational mount joint (103); and the second mount member (102) is rotatably connectable to the opening (2) of a building structure via the second rotational mount joint (104) and where the first and second mount members are rotatably connected to the first end (20') of the scissor type guide (20).
