Abstract (en)

[origin: WO2020136204A1] A luminaire system comprising a first support, a second support movable with respect to said first support, and a moving means configured to move the second support relative to the first support, such that a position of the second support with respect to the first support is changed. The moving means comprises an actuation element configured to be moved along a first trajectory, and a conversion element configured to convert the movement of the actuation element into a movement of the second support along a second trajectory at an angle to said first trajectory. A plurality of light sources is arranged on one of the first support and the second support, and is configured to emit light through one or more optical elements associated with the plurality of light sources and arranged on the other one of the first support and the second support.
