Abstract (en)
[origin: WO2020135977A1] A cooling appliance (1) comprising; a body (2), a compartment (3) inside the body (2) in the form of a rectangle and delimited by a top panel (4), a first side panel (5), a second side panel (6) and a bottom panel (7) wherein the articles to be cooled are placed, a door (8) having an opened position providing access inside the compartment (3) and a closed position preventing access inside the compartment (3) wherein the said panels (4, 5, 6, 7) are adjacent to the door (8) in the closed position. A threaded pim is horizontally inserted onto the top panel (4) from where a part of the threaded pim protrudes towards the front, a top panel cover (10) is placed onto the top panel (4) wherein the top panel cover (10) comprises a slot configured to coincide with the threaded pim.
