Abstract (en)
[origin: WO2020135983A1] The present invention relates to a cable holder (1), which is suitable for use in household appliances, comprising a base (3) which is seated onto the electronic card; a foot (4) which extends in the vertical plane on the base (3); two arms (5) which are connected to the end of the foot (4) and which oppositely extend parallel to each other; and a carrier (2) which is detachably mounted in between the arms (5). By detachably mounting the carrier (2) onto the foot (4) fixed to the electronic card, the coil and the cables wound around the carrier (2) are enabled to be serviced immediately. Thus, the number of windings can be easily changed, and the mass of cables on the control panel of the household appliance are enabled to be kept in an ordered manner.
