Abstract (en)

[origin: WO2020136037A2] The invention relates to a method (1000) for processing measured data (310, 310') of an image sensor (115). The method (1000) comprises a step of reading (1010) measured data (310, 310') which were recorded by light sensors (510) in a vicinity of a reference position (500) on the image sensor (115), wherein the light sensors (510) are disposed around the reference position (500) on the image sensor (115), wherein furthermore weight values (340) are read, each of which are assigned to the measured data (310, 310') of the light sensors (510) in a vicinity of a reference position (500), wherein the weight values (340) for light sensors (510) disposed at an edge region (125) of the image sensor (115) differ from weight values (340) for light sensors (510) disposed in a central region (120) of the image sensor (115) and/or wherein the weight values (340) are dependent on a position of the light sensors (510) on the image sensor (115). Further, the method (1000) comprises a step of linking (1020) the measured data (310, 310') of the light sensors (510) to the assigned weight values (340) in order to obtain image data (350) for the reference position (500).
