Abstract (en)

According to an aspect, there is provided an elevator communication system associated with a building comprising an elevator shaft. The system comprises an ethernet bus (106), an elevator controller (100) communicatively connected to the ethernet bus (106) and configured to communicate via the ethernet bus (106), a plurality of connecting units (104A-140D) disposed along the elevator shaft to implement the ethernet bus (106), at least one bus node (102C) disposed in the elevator shaft separated by a distance from the elevator controller (100) and being communicatively connected to the ethernet bus (106) and configured to communicate via the ethernet bus (106), and a second data channel (108) separate from the ethernet bus (106), the second data channel (108) establishing a direct connection between the at least one bus node (102C) and the elevator controller (100).
