Abstract (en)  
The present application discloses a drum washing machine, including a rotatable drum (1) and a tub (2) accommodating the drum (1), wherein the tub (2) is provided with a laundry input opening (22) located at an end in an axial direction, a wrinkled gasket (4) made of an elastic material is disposed around the laundry input opening (22), a bottom of the gasket (4) is provided with a drain hole (41) in communication with an interior of the tub (2), the drain hole (41) is connected to a drain pipe (5), the drain pipe (5) has an inlet (51) and an outlet (52), and the outlet (52) is located downstream of the inlet (51) relative to a spin direction of the drum. When the drum washing machine performs drying at a high speed, an annular air flow circuit is formed between the drum and tub, so that negative pressure is formed in the drain pipe, and water located at the bottom of the gasket is sucked into the drain pipe and drained through the outlet.
