Abstract (en)
The invention relates to a housing assembly (67), comprising an outer housing (1) with at least one module receptacle (3) for receiving at least one connector-like terminal module (5) and with a connector face (11) at which the outer housing (1) can be connected with a complementary part (15), and with at least one module retainer (17) for retaining at least one terminal module (5) in the module receptacle (3) in an assembled state (69), wherein the module retainer (17) is adapted to be at least partially insertable into a retainer receptacle (19) of the outer housing (1). In order to secure the position of the terminal module (5) in the module receptacle (3), the at least one module retainer (17) is adapted to spring-load a terminal module (5) in the module receptacle (3) towards the connector face (11) in the assembled state (69).
