Abstract (en)
[origin: WO2020141033A1] The invention relates to a rolling apparatus, comprising a stand, at least two rolls, which are attached to the stand by means of chocks and are displaceable in relation to one another in the axial direction, and at least one axial displacing device (108), which is assigned to a chock of at least one of the rolls and can act on this chock. The axial displacing device (108) has a fixed block, at least one displaceable bending block (112, 113) and at least one displacing cylinder (114), which is assigned to the bending block (112, 113) and by which the bending block (112, 113) can be displaced in relation to the fixed block. The fixed block is of a multi-part form.
