Abstract (en)  
[origin: WO2020141384A2] Method for producing a panel, more specifically a load-bearing panel, and even more specifically a mezzanine floor panel, wherein said panel comprises a wood-based substrate and said panel, on at least one side thereof, in the case of a floor panel preferably the underside thereof, is provided with an aluminum layer, characterized in that in production, the aluminum layer and the substrate are bonded to each other by pressing with the intermediary of a bonding layer, using a flat press. The invention further also relates to load-bearing panels, in particular mezzanine panels, wherein an aluminum layer is bonded to a substrate by means of a polyurethane-based or resin-based bonding layer.
