Abstract (en)
[origin: EP3907154A1] The present invention pertains to a household tissue paper container (100) provided with: a container body which houses household tissue paper therein and which has a pull-out section (112) provided with a pull-out hole (112a) through which the household tissue paper can be pulled out; and an opening/closing lid which is for opening/closing the pull-out hole and which is turnably attached to the container body, wherein the pull-out hole (112a) is provided to a bulged portion formed in a substantially spherically swollen shape at the pull-out section (112), and an edge of the pull-out hole (112a) has provided thereto a projecting piece (112c) that projects from the front-side edge toward the back side where the opening/closing lid is attached to the container body. This configuration makes it possible to pull out an appropriate length of household tissue paper (P) repeatedly.
