Abstract (en)
[origin: WO2020136042A1] The invention relates to a module for soil-free growing, the module consisting of a prismatic support member (2 to 5) having two angled panels (6, 7). The medial planes of the panels (6, 7) form an angle of between 30 and 40° with the horizontal plane and the panels (6, 7) constitute a watertight barrier between the space for roots and the space for shoots, and a plurality of openings pass through said panels in order to support a growing medium or a plug for sealing the openings that are not occupied by a growing medium.
