Abstract (en)
[origin: US2020221785A1] A vaping device may include a pre-vapor formulation housing, a heating element, and an insert. The pre-vapor formulation housing may be configured to house a pre-vapor formulation and may define a channel there through. The heating element may be configured to heat at least a portion of the pre-vapor formulation into a vapor and provide the vapor to a first portion of the channel. The insert may be disposed at a second portion of the channel and positioned to receive the vapor. The insert may be subdivided into a first section and a second section. The first section may contain a first material that releases at a first temperature, and the second section may contain a second material that releases at a second temperature. The second temperature may be less than the first temperature.
